III. RESPONSE TO REJECTIONS

Claim 1 recites, *inter alia*:

"A method of **creating a web site**, comprising the steps of:

receiving data entry including selection of an industry type;
determining one or more characteristics for each of one or more web site features in response to the data entry;

creating a framework of the web site based upon the one or more determined characteristics for each of the one or more web site features;

retrieving web site data in accordance with the created framework of the web site;
creating a plurality of pages of the web site based upon the framework of the web site and the retrieved web site data;

generating one or more interfaces to one or more external components on the pages of the web site;

remotely executing an application that may or may not retrieve web site data such that whether content is retrieved is a function of the remotely executed application;

previewing the created pages in a sequence, any changes made on the pages during previewing being automatically propagated through the pages;
registering the one or more interfaces of the one or more external components;
creating website data based on the interfaces and remotely executed application; and
presenting the created web site.” (Emphasis added)

Applicants respectfully submit that nothing has been found in Barrera, Burner, Venkatraman, Bernardo, Wecker, Wilz, Rhoads, or Nakano, taken alone or in combination, that would teach or suggest the above-identified features of claim 1.

Indeed, claim 1 recites “creating a website...” Applicants respectfully submit that Barrera is directed to searching and does not disclose any features that could be interpreted as “creating a website” as recited in claim 1.

The Office Action relies on Venkatraman to reject the claimed feature of: **“remotely executing an application that may or may not retrieve web site data** such that whether content is retrieved is a function of the remotely executed application”. However, column 3, lines 9-30 merely describes transferring information to device (10) such as information that controls the functions or operating states of the device (10). Applicants respectfully submit that the disclosure in Venkatraman fails to teach or suggest the remote execution feature as recited in claim 1.

Claim 1 further recites “registering the one or more interfaces of the one or more external components..”. Applicants respectfully submit that Venkatraman fails to teach or suggest the registering feature as recited in claim 1.

Therefore, independent claim 1 is patentable.

Independent claims 55-58, and 112-114 and 116-119 are similar, or somewhat similar, in scope and are therefore patentable for similar, or somewhat similar, reasons.

IV. DEPENDENT CLAIMS

The other claims in this application are each dependent from one of the independent claims discussed above and are therefore patentable for at least the same reasons. Since each dependent claim is also deemed to define an additional aspect of the invention, however, the individual reconsideration of the patentability of each on its own merits is respectfully requested.

Similarly, because Applicants maintain that all claims are allowable for at least the reasons presented hereinabove, in the interests of brevity, this response does not comment on each and every comment made by the Examiner in the Office Action. This should not be taken as acquiescence of the substance of those comments, and Applicants reserve the right to address such comments.

CONCLUSION

In the event the Examiner disagrees with any of statements appearing above with respect to the disclosure in the cited references, it is respectfully requested that the Examiner specifically indicate the portions of the references providing the basis for a contrary view.

Please charge any additional fees that may be needed, and credit any overpayment, to our Deposit Account No. 50-0320.

In view of the foregoing remarks, it is believed that all of the claims in this application are patentable and Applicants respectfully request early passage to issue of the present application.

Respectfully submitted,
